

Expert Working Group's Terms of Reference

A review of computer models to aid the design and assessment of IM performance

(Excerpt)

The Expert Working Group is to:

- a) Prepare a map of the areas where Computer Models would be of assistance in the design and assessment of IM Performance.
- b) Contact appropriate Technical Organisations (TNO, DGA, BWB, MSIAC, etc) to explore the opportunities for knowledge exchange.
- c) Compile a list of currently available computer models that have a role in the design and assessment of IM Performance.
- d) Specifically assess the MSIAC TEMPER software as a potential intra-company comparative simulation tool.
- e) Review the availability, applicability and capability of each model.
- f) Prepare a précis of the applicability and capability of each model including a strengths and weaknesses assessment.
- g) Complete a gap analysis of the available computer models against the map produced at task (a).
- h) Publish a report with recommendations, which includes the gap analysis and précis's,
